Experiment 1: Interactive Diagram of a Basic Cellular System

Aim

To create an interactive diagram of a basic cellular system using Figma, illustrating the major components such as the Mobile Station, Base Station, Cell/Coverage Area, Radio Link, and Core Network, and showing how they communicate with each other.

Algorithm

Open Figma and create a new design file.

Create a main frame for the cellular system diagram.

Add the Mobile Station representing the user's mobile phone.

Add the Base Station representing the cell tower.

Add the Cell/Coverage Area around the base station.

Add the Radio Link between the mobile station and base station.

Add the Core Network connected to the base station.

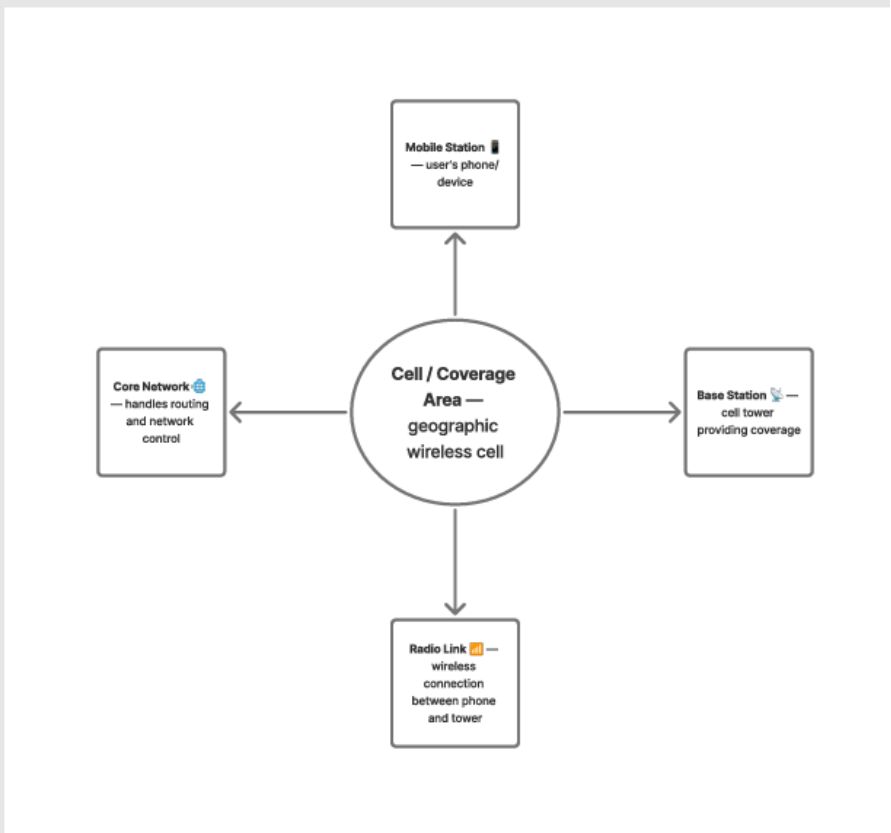
Use arrows/connectors to represent the flow of communication.

Create interactive components for each major element.

Add On Click interactions so that selecting a component displays information about its function.

Use Prototype mode to connect the different states.

Preview the prototype and verify that all interactions work correctly.



Result

The interactive basic cellular system diagram was successfully designed in Figma. It clearly represents the Mobile Station, Base Station, Cell/Coverage Area, Radio Link, and Core Network, along with their communication

relationships. Interactive elements were added to provide information about each component when selected.
