Experiment 2: Mobile Station User Interface Prototype

Aim

To design a user interface prototype for a mobile station using Figma, focusing on connectivity, accessibility, and user convenience.

Algorithm

Open Figma and create a new design file.

Create a mobile phone frame suitable for a smartphone screen.

Design the main Home/Dashboard screen.

Add a Network Status section showing the connected network and signal strength.

Add connectivity options such as:

Wi-Fi

Mobile Data

Bluetooth

Location

Add navigation options such as Home, Contacts, and Settings.

Create separate screens for Wi-Fi, Mobile Data, Bluetooth, and Settings.

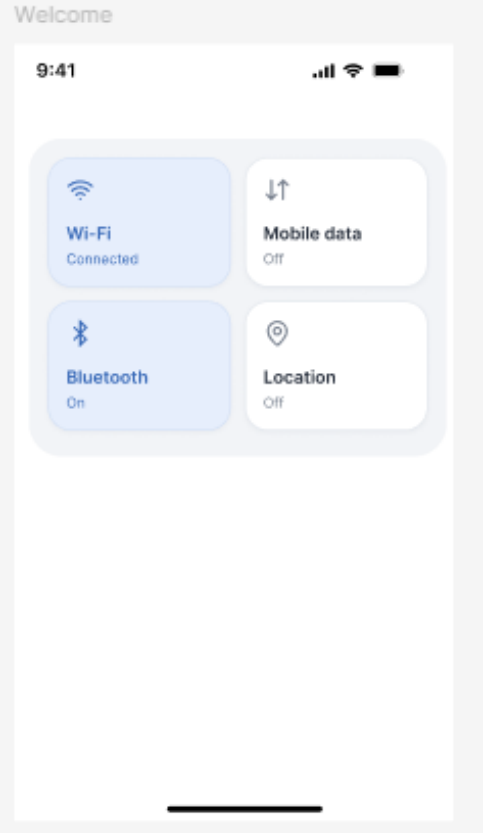
Use buttons and icons to make the interface simple and convenient.

Switch to Prototype mode in Figma.

Add On Click → Navigate to interactions between the screens.

Add suitable transitions such as Smart Animate.

Preview the prototype and test all navigation buttons.



Result

The mobile station user interface prototype was successfully designed in Figma. The prototype provides convenient access to Wi-Fi, mobile data, Bluetooth, location, network status, contacts, and settings. Interactive navigation between screens was implemented to provide a simple and user-friendly connectivity experience.
