Experiment 4 : Visual Representation of Mobile Network Protocol Stacks in Figma

Aim

To create a visual representation in Figma highlighting the key elements and layers of mobile network protocol stacks and showing how communication takes place between the mobile device and the network.

Algorithm

Open Figma and create a new design file.

Create a large frame titled “Mobile Network Protocol Stack”.

Divide the frame into different protocol layers.

Add the Application Layer at the top for services such as voice, video, messaging, and Internet applications.

Add the Transport Layer containing protocols such as TCP/UDP.

Add the Network Layer containing IP for packet routing.

Add the Radio/Link Layer for wireless communication between the mobile device and base station.

Add the Physical Layer representing the radio signal and transmission medium.

On one side, create a Mobile Station (MS) and on the other side create the Mobile Network/Core Network.

Connect the layers using arrows to show the flow of data.

Use different shapes and icons to distinguish each protocol layer.

Open Prototype mode and add interactions such as clicking a layer to display its function.

Preview the design and verify that all layers and connections are clearly visible.

Result

The Mobile Network Protocol Stack was successfully represented in Figma. The visual design clearly shows the different protocol layers, their key functions, and the communication flow between the mobile station, base station, and core network.
