8. Infographic Explaining Public Land Mobile Network (PLMN) Using Figma

Aim

To create an infographic in Figma explaining the concept, components, and working of a Public Land Mobile Network (PLMN).

Procedure

Open Figma and create a new infographic frame.

Add the heading “Public Land Mobile Network (PLMN).”

Include the main components: Mobile Station (MS), Base Transceiver Station (BTS), Base Station Controller (BSC), Mobile Switching Centre (MSC), and external networks.

Arrange the components in a logical communication flow.

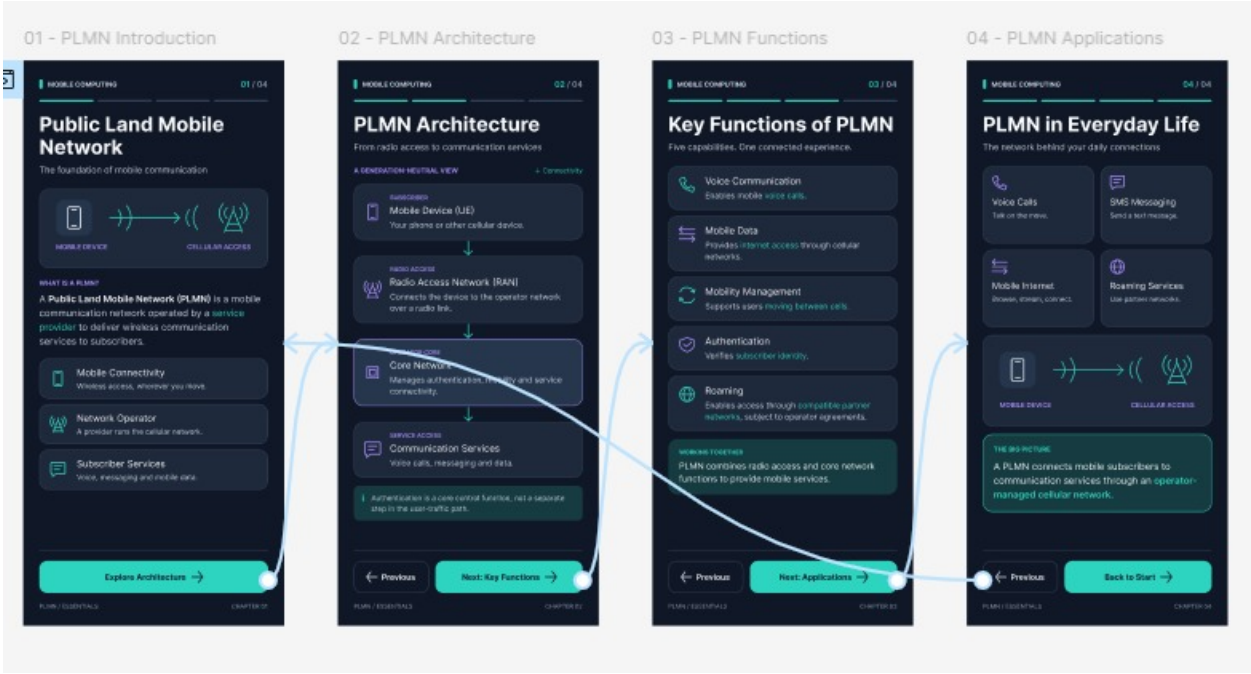

Connect the components using arrows to represent signal and call routing.

Add brief descriptions of each component and its function.

Use icons, colors, and labels to improve visual clarity.

Include examples of PLMN services such as voice calls, SMS, and mobile data.

Review the layout to ensure the information is accurate and easy to understand.

Result

An infographic explaining PLMN architecture and its major components was designed in Figma, illustrating how mobile devices communicate through cellular infrastructure to access network services.
