10. Visual Representation of Multiple Access Techniques Using Figma

Aim

To create a visual comparison in Figma illustrating different multiple access techniques used in cellular communication systems.

Procedure

Open Figma and create a new design frame.

Add the heading “Multiple Access Techniques in Wireless Communication.”

Create separate sections for FDMA, TDMA, CDMA, and OFDMA.

For FDMA, draw separate frequency bands allocated to different users.

For TDMA, draw a timeline divided into time slots assigned to different users.

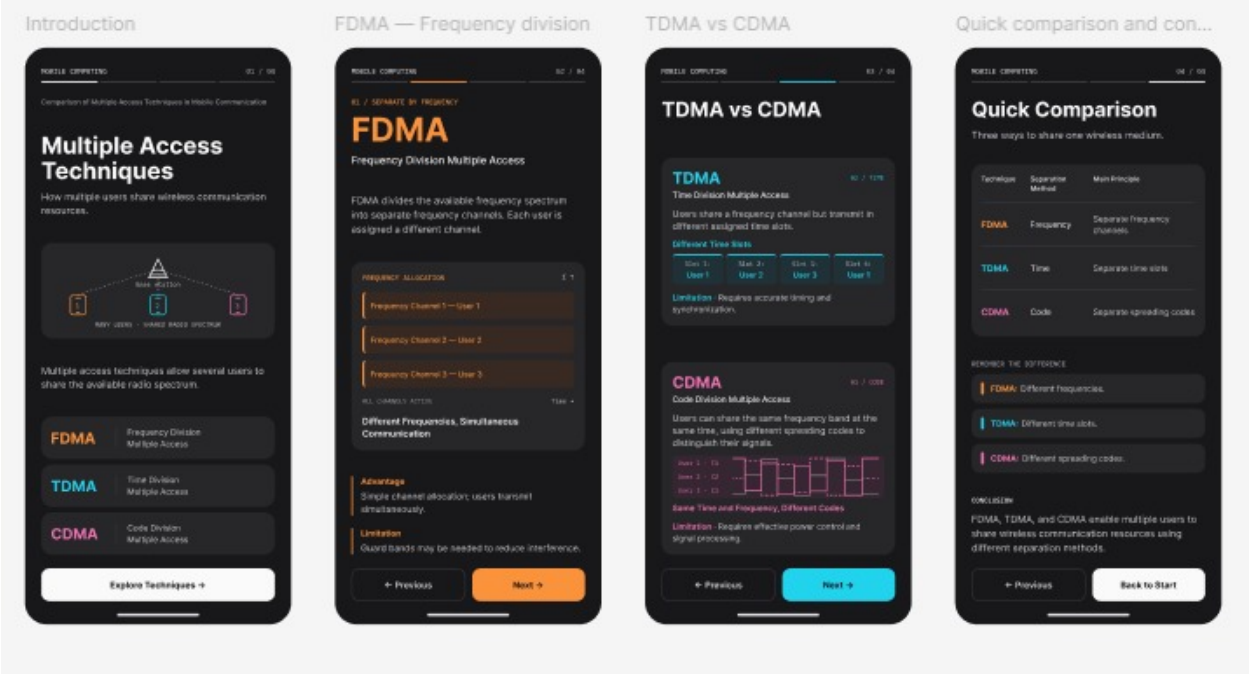

For CDMA, illustrate multiple users transmitting simultaneously using different codes.

For OFDMA, draw a time-frequency grid showing resource blocks allocated to different users.

Use different colors to distinguish users, frequencies, time slots, and resource blocks.

Add a brief description and one key characteristic for each technique.

Align the sections and review the infographic for clarity and accuracy.

Result

A visual comparison of FDMA, TDMA, CDMA, and OFDMA was created in Figma, demonstrating how each technique separates or allocates communication resources among multiple users.
